### Discussion:

Please write a small paragraph discussing teamwork (who did what, how much, was the work allocation fair, did each member respect commitments and deadlines...).

Lamees: I mostly focused on working on the Student Page. I created a table with the available booking slots for a certain date. I started working on the structure behind how we would allow for booking availability to be dynamic according to bookings made on the website- looked at how classes, objects and arrays could be implemented to structure student booking data, to be continued to deliverable 2. The statistics page is very static for now and we would have to find a way to, again, like the booking data with the booking data. The long page is one of the first pages we did, we still were not too sure about the whole structure of the website and so for that page my contribution was mostly conceptual and brainstorming

Other than that, I feel like we overall adapted pretty well to each other's schedules. We tried to follow deadlines we would give ourselves, which most of the time were respected. But even when something unexpected came up it was very well taken and we were in constant communication. We have a group chat constantly updating on what we have done, difficulties we have come across, so overall a good team effort

Elisa: I created the admin page with the different options to choose from and I did the styling of each page to make a dynamic style close to Concordia theme. I think our team worked pretty well together and we each respected each other's availability and divided the tasks fairly.

Lauren: I worked on the style sheet & overall styling of the website to be in alignment with the Concordia themes and have a cohesive feel. I contributed to brainstorming sessions when we had group meetings.

I feel that our team worked well together and everyone was very communicative and responsive.

Mayar: I assisted in the development of the website by designing and building the structure and functionality of important pages, from the index/login page, reset password and reset username pages, and create account pages for students and administrators, as well as developing the core functionality of the Admin Dashboard, ensuring all administrative action items were fully accessible, and the Student Dashboard, which facilitates the ability to view and manage bookings and account settings. I did this work for both the HTML structure and design, ensuring all pages downstream were fully functional and visually consistent throughout the site.

Our team managed our collaboration well, worked to accommodate everyone's schedules, tracked progress and served updates regularly enough to address sticking points promptly. Our communication was regular, responsibilities were divided well, and thus we met most of the self-imposed timelines. The collaborative effort was seamless, and everyone contributed in a significant way, which left the workflow feeling productive and organized overall. I feel as though moving forward we have a good relationship of how we can work together and be able to progress in this project for the later deliverables.
